## Cubasis 3.8

# Cubasis 3.8 | Version History

## New Features

- Added **Bass Amp** with iconic amps, cabs, stomp effects, and pro preset library.
- Introduced **Amp Rack** with legendary amps, guitar effects, and genre-ready presets.
- Added **Tuner** with simple and advanced modes for fast, accurate tuning.
- Added **Verve and Etude Cubasis plug-in versions** for users of the iOS apps.
- **Improved MIDI File support** with Tempo and Signature track import/export.
- Enabled **portrait mode support** on iPad and Android tablets.
- Added **full screen** and **windowed app support** for iPadOS 26.
- Added **Bluetooth recording** support, as well as AirPods high-quality recording on iOS 26.
- Added **audio input/output device selection** on iOS.
- Enabled **stereo recording** with internal mics of iOS devices.

## UI & Workflow Improvements

- Effect rack now has a preset display with arrows for browsing.
- Selecting an effect preset now enables the effect.
- Double-tap on an event in select mode now opens the editor.
- MIDI recording doesn't create a new event anymore if the editor is open.
- Keyboard now remembers open panels.
- Horizontal scrolling with mouse and trackpad in arranger view supported.
- Routing popups now positioned correctly and close when tapped again.
- Zoom panel no longer overlaps automation handles.
- Fixed hidden instrument list back arrow after adding an AU multi-output track.
- iOS keyboard shortcut hint "close view" is now displayed correctly.

## Performance & Stability

- Instrument content is now shared between Cubasis 3, Cubasis 3 LE, and Steinberg's AUv3 instrument apps on iOS.
- Optimized hardware-accelerated UI rendering.
- Improved undo reliability.
- Fixed a crash when launching on external display connected to iPad.
- Fixed crashes on some Android devices (Pixel Fold) after content download.
- Fixed an intermittent crash when launching Cubasis on iPad 7th generation.
- Improved stability when changing Iconica Sketch presets.
- Fixed audio hiccups when loading projects during playback.

## Audio & MIDI Enhancements

- EQ bypass state is now correctly exported/imported in DAW project files.
- Improved tempo track recording and playback sync.
- MIDI file export moved from the Mixdown to the MediaBay's Share dialog.
- MIDI file import and export consider tempo and signature tracks.
- Improved MIDI file import/export handling of drum channels.
- Muted notes are no longer exported to MIDI files.
- Fixed crackling noise when removing or toggling effects or switching presets.
- Fixed crackling noise when switching Micrologue presets.
- Fixed audio playback issues when converting stereo to mono during playback.
- Fixed issues with the ruler's grid and labels when using the signature track.
- Automation points are no longer cropped at the top and bottom.
- Send level automation points no longer lie outside the editor.
- HALion Sonic Selection, NeoFM, FM Classics and LoFi Piano now respond to CC7 volume control.
- HALion Sonic Selection octave, coarse, fine and pitch-bend knob arcs now start from the center.

## Bug Fixes

- Undo of event copying via handle works as expected.
- Undo of effect and instrument parameter changes works as expected.
- Dry mixdown or track freeze with a send effect now works as expected.
- Audio Unit UIs are no longer hidden while the undo info popup fades out.
- Keyboard shortcuts now work while undo info popup is visible on Android.
- Corrected folder behavior when opening effect rack after saving an AU effect preset.
- Fixed wrong file naming when doing a mixdown to separate files.
- Instrument list browser updates correctly when switching between AU tracks.
- StudioEQ curve and band switching issues resolved.
- Fixed broken UI after loading large MIDI projects.
- Fixed punch-out functionality in cycle mode.
- Fixed missing popup when AUs are unavailable.
- Fixed chaotic automation lines when pasting.
- Fixed wrong gluing results with different audio event states.
- MIDI output notes at the cycle start are no longer cut off if no instrument is assigned.
- Fixed the file name when sharing to Google Drive on Android.

## Cubasis 3.8 | Version History

- Fixed broken insert slots in a new project in Cubasis LE 3.
- Fixed broken MediaBay icons in Cubasis 3 LE for Android.
- Shop demos now play correctly on all Android devices.

### Technical Updates

- Updated Android API target to API level 36.
- Updated Android audio engine to Oboe 1.9.3.
- Updated Ableton Link to LinkKit 3.2.1.
