CUBASIS
NEW IN 3.6.5

New Features
New in Cubasis 3.6.5

Get inspired to create great music faster and more intuitively with Cubasis, thanks to exciting new features and workflow improvements.

Audio Glue
Select several events and combine them in a single audio track, via a simple tap.

Convert files to mono
Quickly convert stereo tracks to mono in the audio editor and mixdown popup.

Copy and paste revisited
Easily create event copies by a simple tap, hold and move your finger to the right.

Search your instruments, effects, and presets
Simply type to search across all your plug-ins and presets, incl. Audio Unit support.

Smoother level metering with peak hold support
Enjoy smoother level meters, which make mixing more pleasing and accurate.

Mixdown to MP3 and AIFF
Easily create and share MP3 and AIFF versions of your tracks.

Improvements
Capture your ideas with ease, using one of the most stable mobile DAWs.

Additional Features and Improvements
Arrange Window

CBT-3750 Resolves a rare issue where dragging audio files into the Arrange Window resulted in the wrong track order.

CBT-3760 Moving an audio event's handle fully to the right no longer breaks the event.

CBT-3746 Fixes an issue, where the MIDI event length increased too fast when increasing multiple events lengths.

CBT-1183 Fixes a problem where selecting another MIDI track could result in hanging notes.

CBT-3223 MIDI events can now be glued when the automation editor is open.

CBT-1355 Ruler now shows the same grid as the selected snap grid in the arranger and all editors.

CBT-3717 Resolves a problem where the metronome does not play in the Gravity demo project.

Additional Features and Improvements
Instruments and Effects
